

TOTAL BODY DERMOSCOPY

The Evolution of Revolution

The **ATBM master** reinvents Automated Total Body Mapping as Total Body Dermoscopy. Our latest system for skin imaging enables full body photography in just minutes. FotoFinder's special RAW image processing and cross polarized camera system allow skin imaging at spectacular image quality. The intuitive interface makes it quick and easy to photograph a patient. The **ATBM master** offers a streamlined workflow which saves significant time in comparison to traditional Total Body Mapping and sets a new level of quality!

Function and Design

The **ATBM Master** is an elegant piece of engineering. The FotoFinder Silent Medical Server is a whisper quiet high-performance PC with massive storage capacity and redundant hard drives. FotoFinder's Q-Processor acts as the heart of the **ATBM Master** managing all FotoFinder tasks related to image storage, encryption, and display.

Mosaic View

FotoFinder's **Mosaic View** is a smart way of reviewing total body photos. Providers can review lesion images on a tile view and compare their appearance to other lesions captured at that time point. The position of a lesion is quickly identified on a global view and marked for further examination.

PolFlash XE

The **ATBM master** captures high-resolution, RAW images for superior image quality. The computer controlled PolFlash XE offers both cross-polarized lighting, eliminating glare for medical skin imaging, and studio lighting for aesthetic treatment documentation. Zoom in on total body images and view skin at impressive detail immediately. Take your evaluations to the next level with the integrated medicam 1000s camera for excellent dermoscopy photos.

Hospital System Integration

FotoFinder Universe software is a flexible client server application which can be deployed in large networks. Multiple camera systems can operate simultaneously with one shared database. Optional integration with HL7 and DICOM is available to transmit patient information and images between FotoFinder and your EMR.

ATBM master

The future is Total Body Dermoscopy

Mosaic View
The tile view of lesions on one single screen for quick comparison.

High resolution images with PolFlash XE
High resolution camera system with xenon flash. Whole body photos in RAW format, cross-polarized or non-polarized.

Intelligent, multifunctional platform with new design
Versatile in its use, with modules for medical imaging and aesthetics.

Truly mobile ATBM tower with automatic camera lift
Automatic camera lift for even faster mappings and durable FotoFinder high-performance quality hardware.

Powerful Q-Processor
The heart of the ATBM master, the Q-Processor powers all features to ensure maximum performance.

Integrated Aesthetics Module
Automated image capture process with computer controlled variable optical zoom.

New Total Body Dermoscopy workflow
Faster workflow for capturing and reviewing images significantly reduce the examination time.

True video dermoscopy with medicam 1000s
Seamlessly integrated Full HD video camera with CrystalView technology and optical live zoom.

Optional HL7 And DICOM integration
Giving your team access to images in the EMR.
